

## CONSULTING AND STAFFING SERVICES

---

### Animal Care and Research Support

Charles River Laboratories Consulting and Staffing Services was formed in 1993 to address the growing need of academic, government, institutional and commercial customers for high quality animal research support on a contract basis.

These organizations wanted to enjoy the financial and technical advantages of outsourcing their animal care support to a proven service provider without compromising quality or distancing animals from researchers, while still maintaining control over day-to-day operations.

Today, Charles River supplies hundreds of qualified managers, scientific, veterinary, and animal husbandry professionals to customers in the government, commercial and non-profit sectors.

Our contract personnel range from entry level cagewash and animal care personnel, aquatics technicians, and technically skilled veterinary technologists, to degreed and board-certified veterinarians.

Each of our contract sites enjoys the full support of Charles River's extensive corporate resources to ensure complete customer satisfaction.

On a confidential basis, Charles River staffing professionals are available to discuss your staffing needs and, upon request, to conduct an on-site evaluation of your overall staffing requirements.

### Additional Services

In addition to providing well-trained and reliable personnel on a contract basis, Charles River offers additional support services in conjunction with its staffing efforts, including:

- Facilities assessment, design and environmental analyses provided by our engineering professionals
- Assistance in the preparation and review of SOPs, program protocols and other critical documentation
- Assistance in preparing facilities and programs for AAALAC accreditation
- Quality Assurance audits to ensure compliance with relevant internal, regulatory, and industry standards
- Biosecurity audits and evaluation reports
- Project-based professional services, including assistance in technical and non-technical training, health surveillance and diagnosis, and other specialized services as needed
