

BIOCONTAINMENT

Scientific and Technical Support

The complexity of biological agent characterization and forensics often demands additional team members to support our customer's programmatic requirements. Charles River can meet this need by timely integration of a wide range of skilled professional and technical support staff.

In providing well-trained and reliable personnel on a contract basis, Charles River offers a menu of additional support services in conjunction with its staffing efforts, including:

- Human Resources support team to manage recruiting, hiring, benefits, career development, safety and health
- Tailored training and career development of new hires and existing staff
- Expeditious visa applications for valuable personnel
- Engineering consultation on facility design, construction and commissioning
- World-class expertise in animal health, infection control and humane care
- Proven quality assurance and monitoring programs
- Interpretation and application of regulatory guidelines
- Select agent experience

Ancillary Services

Charles River Laboratories is the proven leader in providing animal research models for both basic and applied research and development.

Charles River Laboratories is also a premier supplier of sophisticated biomedical products and research support services for biosecurity protection and program accreditation.

For more information on Charles River's Consulting and Staffing Services, please call 1-866-CRLSTAF or visit us online at www.criver.com.

Recognizing that scientific staff differ in qualifications and biocontainment experience, we will partner to define the most appropriate combination of skills and credentials to fulfill your need.

Charles River has a solid record of superior contract support in the biocontainment arena, experience in select agent use, and the capability to train and provide qualified technical and professional team members for your laboratory.
