

## CONSULTING AND STAFFING SERVICES

---

### Scientific Support

Charles River Laboratories is a leader in providing animal research models required in both basic and applied research and development.

Charles River is also a premier supplier of sophisticated biomedical products and services to support basic research, drug development, and new therapeutic approaches.

Because of the dynamic nature of biomedical research, our customers often need additional scientific staff to support their research programs. Charles River can meet this by supplying a wide range of scientific talent, including transgenic technicians, microbiologists, molecular biologists, embryo cryopreservationists, and other specialized scientific staff.

Depending on the need, this scientific staff may range in qualifications from the BA/BS level, to the PhD level. We work with you to define the most appropriate combination of skills and qualifications to fill your need.

In each case, we can provide our customers with a wide array of animal care, research, and scientific support, tailored to meet the unique and specific needs of each site.
