

Surgically Altered Animals: Special Supplementation Requirements

You have received animals that have undergone one of the following procedures (*checked below*). Please note these special supplementation requirements, as they are critical to the post-surgical health of your animals:

Procedure	Description	Supplementation Requirement
<input type="checkbox"/> Adrenalectomy ADREX	Both adrenal glands have been removed.	Normal saline (0.9%) supplementation of water is required post-surgically.
<input type="checkbox"/> Hypophysectomy HYPOX	The pituitary gland has been removed.	5% glucose or sucrose supplementation of water is required post-surgically.
<input type="checkbox"/> Parathyroidectomy PARATHYROX	The parathyroid glands have been removed, leaving the thyroid glands intact.	1% calcium lactate water supplementation is required post-surgically.
<input type="checkbox"/> Thyroid-Parathyroidectomy THYRO+PARA	Both the thyroid and parathyroid glands have been removed.	1% calcium lactate water supplementation is required post-surgically.
